

## MATERIAL :

- 1 | Wire twister
- ... | Metallic wires of your choice
- ... | Beads of your choice
- 1 | Cutters

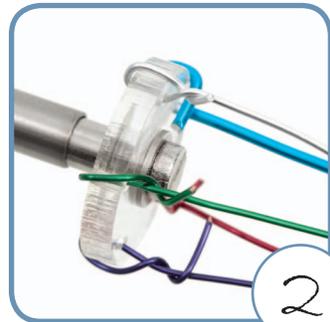

## Preparation :

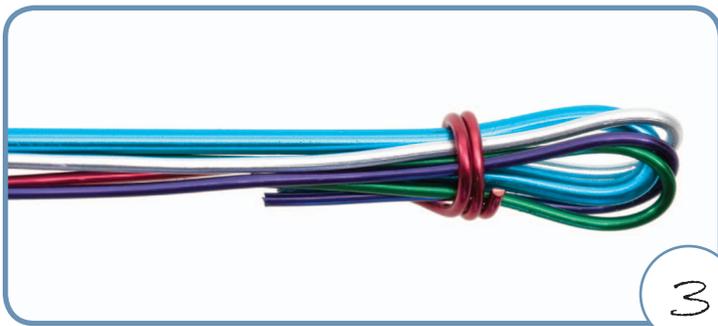

1

1- Choose the wires you will use to create twisted jewelry. You can mix up wires of different gauges, colours and materials.

2

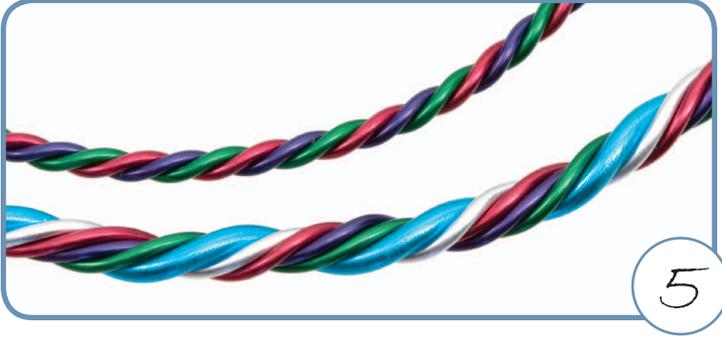

2- In order to place your wires on the acrylic disc, pass them through the various holes around the disc. As the picture demonstrates, twist the wires on themselves.

3

3- Make sure all the wires are of same length. Bend the other extremities. Regroup the wires by tying them together. Hook the loop on something sturdy. Start turning the handle.

## Finishing:

5- Unhook the wire from the wire twister and cut the parts that are not twisted.

And there you go!

Time to create masterpieces.
