

MAKING A MOULD FOR POLYMER CLAY

Materials :

- Mold maker (2901-0307)
- Polymer clay
- 1 oven-proof plate
- 1 super slicer for polymer clay
- Objects to form the moulds
- 1 beading awl or sharp-pointed tool

1

Slice the desired amount of clay to make your mould. Make a ball, then flatten to ¼ inch thick.

2

Carefully press the objects into the clay.

3

Carefully withdraw the object, using the awl if necessary. Place the mould on oven-proof plate.

Bake at 275 °F for 15 minutes. Take the mould from the oven and let cool on the plate.

4

Form a ball with the polymer clay, then press it into the mould. Be certain that all parts of the mould are filled.

5

Carefully remove the clay. Cut away the surplus clay with the super slicer. Use a pointed tool for the smaller details.

6

Bake the shapes following the instructions on the package of your polymer clay.
